

Power supply connection diagram for Solid State Regulated Power Supply v23 with Z-Mod PH10 and AIKIDO.

For clarity, the wires are shown as they are, but do not run them as shown, instead, twist each pair neatly and run them nicely along the sides of the pcb's!

Especially twist ALL AC wires and try and keep them away from DC and signal wires!

Connect a wire from the GND pads. to the right of C9 on the power supply pcb. to chassis ground!
